

"I would consider K2 Audio as the elite, top-tier audio/multimedia design consultant."

CIVIC EXPERIENCE

CIVIC DESIGN

K2 Audio offers over 150 collective years of global experience in the design of audio/video systems and acoustics. We understand the technical, functional and operational needs of courts, government offices, legislative spaces and other civic facilities, and specialize in providing each individual project with a design that incorporates the most appropriate technologies and products.

For the last 15 years, our staff has designed AV systems for most hearing rooms and legislative facilities at the United States Senate and House of Representatives in Washington DC. Our experience also includes projects such as the Sandra Day O'Connor Federal Courthouse, the Frank Crowley Courts Building and the Capitol Visitors Center in Washington, DC. The comprehensive nature and broad scope of these projects have given us the experience required for many applications above and beyond basic sound reinforcement and video presentation, including audiovisual archiving, video production and broadcasting, multimedia presentation and media management, campus wide audio and video networking, sound masking, zoned paging, and integrated AV and media control systems. Additionally, we pride ourselves in our ability to design highly-reliable systems and to incorporate advanced redundancy and system monitoring technologies where applicable.

At K2 Audio, we understand that each customer has specific needs and that civic facilities have particular requirements that cannot be addressed using a one-size-fits-all approach. We work closely with the architect, owner and all members of the design team, to ensure that the AV and acoustic systems we design not only meet the functional requirements, but integrate seamlessly into the space.

SELECTED STAFF EXPERIENCE
